FULL MULTIPLE CONDITIONS

WHAT ARE MULTIPLE CONDITIONS

A realworld example of fulfilling multiple conditions, if like when you have more than one condition that needs to be satisfied before doing a certain action. Say you arent allowed to go to the party friday night unless you finish your homework and did all your chores for the week. Can you think of an example?

BOOLEAN LOGIC

When you have the **AND** keyword between two conditions, both of them have to be satisfied, thus they both must be true.

When you have the **OR** keyword between two conditions, one of them have to be satisfied, thus at least one must be true.

QUIZ ANSWERS

1. c) 2. b)
